

Special Session on “Relationships between sediment and biota in transitional water ecosystems and harbours”

M. Renzi, M. Pinna, A. Basset

Department of Biological and Environmental Sciences and Technologies,
University of the Salento, SP Lecce-Monteroni, 73100 Lecce, Italy

+ Exploring effects of sediment resuspension on biota ...How to do more with less?...

A possible strategy to reduce costs of monitoring program could be represented by the development of the biomarker approach in new and more suitable species (i.e. macrobenthos?) and the selection of new biomarkers to evaluate early stress on aquatic communities.
