

Sediments and society

Communicate sediment issues more effectively using stories that the public and policy makers can relate to.
(economic benefits, recreation, biodiversity)

The occurrence of natural disasters (e.g. storm) help to speed up getting across the message to policy makers or coastal managers. Something has to be done quickly.

People rather than science. Science alone doesn't get projects carried out. Community interest helps. Get involved and have influence on the outcome.

Dealing with emerging contaminants is a new challenge. They constitute a black box. Should the public be concerned?
