## Contamination of sediments in large riverine systems – assessment and its apprehension

#### Ewa Szalińska

Cracow University of Technology Faculty of Environmental Engineering

Contamination of sediments in large riverine systems – assessment and its apprehension

- "Sediment quality and perception"
- State of the system?
- How to evaluate spatial/temporal trends?
- What is the major concern and what to compare with?
- Has anything changed?
- Is it acceptable or negligible?

#### State of the system?

- Great Lakes AOCs (areas of conce
- areas that show severe environm......
- areas that fail to meet the general or specific objectives of the agreement
- BUI's (beneficial use impairments)
- a change in the chemical, physical, or biological integrity of the Great Lakes system sufficient to cause...
- 11of 14 BUI's related to sediment contamination

e.g. degradation of benthos; restrictions on dredging activities; degraded fish and wildlife populations...

Source: White Paper by the Sediment Priority Action Committee Great Lakes Water Quality Board International Joint Commission, 1997

#### State of the system?

- GLNP (Great Lakes National Program
- Two-phased sediment assessment approach
- 1<sup>st</sup> sampling of AOCs to pinpoint hot-spots
- 2<sup>nd</sup> delineation and remedial decisions

#### CUMULATIVE VOLUME OF SEDIMENT REMEDIATED IN THE U.S. GREAT LAKES BASIN SINCE 1997\*

## How to evaluate spatial/temporal trends?

- Judgmental/probablility based
- Temporal trend analysis of time series
- Confounding factors in large s

- Lenght: 51 km
- Width: 1 4 km
- Catchment: 2000 km<sup>2</sup>
- Flow:  $5200 \text{ m}^{3/\text{s}}$

Source: Szalinska et al. (2013) Chemosphere 93, 1771-1781

# What is the major concern and what to compare with?

- Metals (Cd, Cu, Pb, Zn, and Hg)
- Organics (PCBs, PAHs)
- Sediment quality guidelines LEL/SEL, TEL/PEL,
- Consensus based values TEC/PEC
- PECs outdated, have low predictive reliability, do not reflect state-of-the-art sediment science
- Local background concentrations?!

# What is the major concern and what to compare with?

### Has anything changed? NO

- PCA (principal component analysis)
- River wide mass balance
- Getis-Ord Gi\* statistics

Note: About technical details on Getis-Ord PLEASE ask: Alice Grgicak-Mannion (grgicak3@uwindsor.ca)!

| Has anyth            | ning changed? NO    | unture la  |  |  |

#### Has anything changed? NO, NOT REALLY

#### Polygon boundaries: <u>blue – cold</u>, <u>red – hot</u>, <u>green – intermediate</u> Delineation based on p-value and z-score

#### Source: Szalinska et al. (2013) Chemosphere 93, 1771-1781

#### Is it acceptable or negligible?

## • No changes

(according to the performed assessment)

- Do we care?
- "Out of control: How we failed to adapt and suffered the consequences"

Source: Kalafatis et al. (2015) J of Great Lakes Research 41 (sup.1), 20-29

#### Is it acceptable or negligible?

#### 3 scenarios:

- Status quo: "The Fog"
- A dystopian future: "The Wreckage"
- A utopian future: "The Lighthouse"

Source: Kalafatis et al. (2015) J of Great Lakes Research 41 (sup.1), 20-29
