Zadar (HR) PCB in soil and marine sediment samples

CONCLUSIONS

- The correlation with the TOC is too weak to be the only explanation
- One possibility would be, that the PCBs are also adsorbed on clay minerals in the finer and on iron-oxide spherules or porous limestone fragments in the coarser fractions
- The light PCBs seem to have been enriched in the soil, whereas the marine sediments show an enrichment in the heavy PCBs suggesting different sources or different bio-degradation mechanisms.

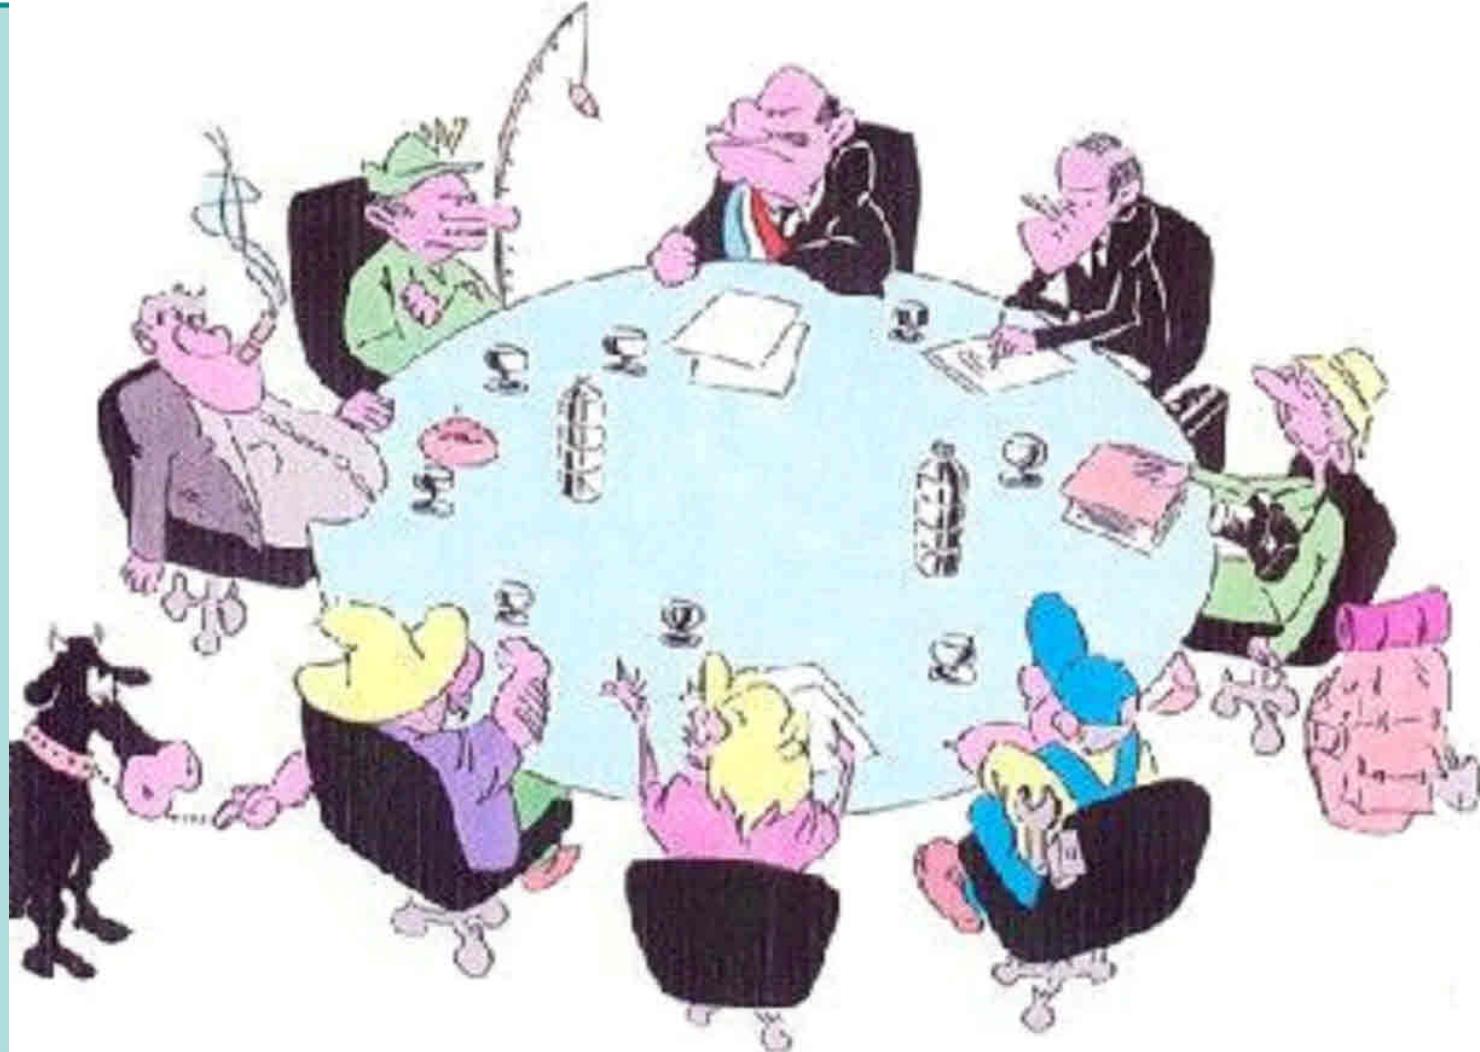

Zadar (HR) PCB in soil and marine sediment samples

CONCLUSIONS

- PCBs are enriched in fish caughted in the harbour basin only
- PCBs are a common contamination in harbour basins and may also originate from old painting of ships

Thank you for your attention!

Publications

PICER, M.; PICER, N.; T. KOVAČ, V.; CENCIC KODBA, Z. & KRALIK, M. (2003): PCB-contamination in soils of the electrotransformer station in Zadar as consequence of oil spills during war action (Croatia). In: Kralik, M.; Häusler, H. & Kolesar, C. (eds.): Abstracts of the 1st conference of Applied Environmental Geology in Central and Eastern Europe. 7-10th Oct. 2003, Rep. 228, 190-191, Federal Environment Agency, Vienna.

HASLINGER, E.; KRALIK, M.; PICER, M.; PICER, N.; OTTNER, F. & CENCIE KODBA, Z. (2005): PCB-contamination in "Terra Rossa" soil samples of an electro transformer station in Zadar as consequence of oil spills during war action (Croatia). Abstr. Soil indicators – Annual Meeting Austrian Soil Sci. Soc., May 12 & 13th, Ljubljana, p. 34-35, Inst. f. Bodenforsch., Univ. f. Bodenkultur, Wien.

Planned publication:

1. PCB distribution in "Terra Rossa" type soil of ETS Zadar
2. PCB distribution in marine harbour sediments of Zadar
3. Together with S. Kapelj "PCB-groundwater vulnerability" in the Zadar area
