The use of bioassays for an assessment of ecological risk in the bottom sediments

Agnieszka BARAN¹, Magdalena SZARA¹, Barbara WOJTASIK², Marek TARNAWSKI¹, Tomasz KONIARZ¹, Agnieszka KLIMKOWICZ-PAWLAS³

¹University of Agriculture in Krakow, ²HydroBiolLab, Gdynia, ³Institute of Soil Science and Plant Cultivation – State Research Institute, Pulawy, Poland

The aims of study were to evaluate the ecotoxicity of the sediments and to integrate chemical analyses and toxicity bioassays in order to assess the risk connected with the presence of pollutant in the sediments

Bioassays - Toxic effect

- useful, cost-effective and rapid tools,
- assess real risk from the presence of multiple stressors in sediments,
- integrate the biological response under the different substances in non-adapted organisms

Battery of bioassays

<table>
<thead>
<tr>
<th>Trophic level</th>
<th>Organisms</th>

<tbody>
<tr>
<td>Producers</td>
<td>S. alba</td>
<td>Phytotoxkit</td>
<td>Root growth inhibition</td>
</tr>
<tr>
<td>Consumers</td>
<td>H. incongruens</td>
<td>Ostracodtoxkit</td>
<td>Mortality, growth inhibition</td>
</tr>
<tr>
<td>Consumers</td>
<td>T. platyurus</td>
<td>Rapidtoxkit</td>
<td>Inhibition of food ingestion</td>
</tr>
<tr>
<td>Decomposer</td>
<td>V. fischeri</td>
<td>Microtox®</td>
<td>Luminescence inhibition</td>
</tr>
</tbody>
</table>

The ecosystem - Impact

- organisms belong to various taxonomic groups,
- represent various levels of the food chain,
- different sensitivity,
- different endpoints and time exposure
- phases of sediments (solid phase, pore water)

Contaminants - Hazard

- useful, cost-effective and rapid tools,
- assess real risk from the presence of multiple stressors in sediments,
- integrate the biological response under the different substances in non-adapted organisms

The aims of study were to evaluate the ecotoxicity of the sediments and to integrate chemical analyses and toxicity bioassays in order to assess the risk connected with the presence of pollutant in the sediments
