

Sustainable sediment management in coastal infrastructures through an innovative technology: the MARINAPLAN PLUS LIFE project

The mass balance is neutral
Sediment in = Sediment out
THIS IS NOT DREDGING, THIS IS NOT BEACH NOURISHMENT

The **ejector** works with the sediments that naturally come to a certain area, and so it does not add or remove the sediment from that area. Once the plant reaches the steady-state condition (i.e. few minutes), the marine ecosystem is not affected by the plant anymore.

Sustainable sediment management in coastal infrastructures through an innovative technology: the MARINAPLAN PLUS LIFE project
