The usefulness of bioassays for sediment quality assessment - A question of reproducibility, uncertainty and interpretation

Poster 104

Wednesday
18-18:30

Sediment cores of up to 80 cm depth
Sampled at 2 sites
every 2 weeks
3 to 5 times

Biotests of 3 cm thick slices
elutriates (algae, microtox)
sediment (bacterial contact test)

LBT, Hohendeicher Hafen

Luminescence bacteria test (Microtox)

Reproducible results for natural sediments!
