

# COP26 Climate Change and Sediment Management Pledge<sup>1</sup>

November 2021

Climate change is an existential threat. In the lead up to COP26<sup>2</sup>, commitment to tackling the climate and ecological emergencies has never been greater. There is a need for urgent action, across all sectors, to decarbonise – while at the same time strengthening resilience and adapting to the changing climate.

**Sediment managers – scientists and researchers, water managers, port and waterway operators, flood protection managers and similar, as well as those in the dredging and construction sector – all have an important role to play.**

Infrastructure and operational resilience are often intertwined with the resilience of the natural environment. Climate change will impact on both. Nature-based solutions are moving rapidly up the international climate change agenda as a potential win-win solution to help address both the climate and ecological crises.

Sediments are an integral part of aquatic systems, the building block for natural habitats and an inherent component of many ecosystem services. Sediments and their associated aquatic habitats – blue carbon stocks – also play a vital role in sequestering and storing carbon.

*The organisations endorsing this pledge recognise that understanding and working with these critical, inter-related natural processes will enable sediment managers to identify and deliver solutions that benefit not only climate and nature, but also society and economy.*

To this end, *these organisations*<sup>3</sup> will strive to:

- Promote, capitalise on, and where appropriate positively exploit **sediment's carbon storage** properties
- **Attain net zero** emissions from their sediment management activities, including through selection of methods, equipment and transport, while at the same time seeking opportunities to save costs
- Reconcile **sustainability** and adaptation needs with ongoing human activities
- Find innovative but effective ways to deal with **climate change uncertainties** including using improved knowledge and monitoring abilities to support **adaptive management**
- Consider and where appropriate apply **nature-based solutions** for societal/infrastructure resilience and nature co-benefits: take action to **scale up** such solutions, including **facilitating dialogue** to help change entrenched current practice
- Develop specific **technical** and scientific **know-how** where gaps are identified; continue to support relevant technological innovation and research
- Seek and exploit sustainable **financing** opportunities, taking advantage of **green recovery** initiatives
- Engage, as stakeholders, in discussions to ensure **policy instruments** reflect the position set out in this pledge
- Through all of the above, contribute to achievement of UN **Sustainable Development Goals**

---

<sup>1</sup> This COP26 Pledge started life as an outcome of the virtual workshop 'Sediment management opportunities to address the climate change challenge' hosted by Navigating a Changing Climate (<https://navclimate.pianc.org/>) and SedNet (<https://sednet.org/>). The workshop summary document can be downloaded at <https://sednet.org/wp-content/uploads/2021/06/Summary-and-outcomes-NavClimate-SedNet.pdf>

<sup>2</sup> The COP26 summit in November 2021 will bring parties together to accelerate action towards the goals of the Paris Agreement and the UN Framework Convention on Climate Change; see <https://ukcop26.org/>

<sup>3</sup> Listed below in alphabetical order

The undersigned (in alphabetical order):

ABPmer

Colin Scott,  
Associate

Arup

Borbala Trifunovics,  
Associate Director

Beachmed a.p.s.

Francesca Lupino,  
President

Biology Centre CAS

Jakub Borovec,  
Research group leader

BRGM

Bruno Lemière,  
Projects leader, international

Cefas

Stuart Rogers, Prof Stuart  
Rogers CSci FIMarEST FMBA  
Chief Scientist Cefas, Hon  
Professor UEA

Council for Agricultural  
Research and Economics

Stefania Nin,  
Researcher of CREA -  
Research Centre for  
Vegetable and Ornamental  
Crops

Danish Maritime

Jenny N. Braat,  
CEO

Deltares

Gerard Blom,  
Business Unit Manager  
Subsurface & Groundwater  
Systems
